Results

Impression

Acute lacunar infarcts in the thalamus and posterior limb of the internal capsule on the left.

Moderate chronic small vessel ischemic disease.

Signed by: Miguel Trelles De Belaunde on 8/17/2024 12:45 PM

Narrative

SIGNS AND SYMPTOMS: Right sided numbness and speech changes

Patient age: 62 years MRN: 970717425 RLLED

NOTES: right side facial numbness trouble with speech , motion repeats blade scans utilized

COMPARISON EXAM: 08/17/2024.

PROCEDURE: MR BRAIN WITHOUT CONTRAST.

FINDINGS:

Acute lacunar infarcts in the left thalamus measuring 0.9 cm in maximum diameter and in the posterior limb of the internal capsule on the left measuring 0.6 cm maximum diameter. No other foci of acute ischemia is identified. No evidence of hemorrhagic conversion.

Scattered T2 and FLAIR hyperintensity is present throughout the brain parenchyma suggesting moderate chronic small vessel ischemic disease.

The rest of the brain parenchyma shows preserved gray-white matter differentiation. There is no evidence of mass, mass effect, intra or extra-axial fluid collection, or hydrocephalus. A few small foci of susceptibility present in the left cerebral hemisphere. The ventricles, sulci and basal cisterns are preserved.

Normal flow related signal is seen within the vascular structures.

Orbits, paranasal sinuses and mastoid air cells are clear.

Authorizing provider: Zachary Duarte

Reading physician: Dr. Miguel Trelles de Belaunde, MD
